

How to create your own screen saver

You need two things:

1. Pictures stored on your hard drive – preferably in the “My Pictures” folder in XP or the “Pictures” folder in Vista.
2. Have Windows XP or Vista – this won’t work in Windows 98

1. Open the Display properties window using one of the two following methods.

a) **Right click** on a blank spot on the desktop, and then click on **Properties**

OR

b) Click on **Start** then click on **Control Panel**. In the Control Panel window, click on **Appearance and Themes** and then click on **Display**.

2. In the Display Properties window, click on the **Screen Saver** tab.

3. On the Screen Saver page, click the drop down list under the picture and click on **My Picture Slideshow** to select it.

4. With the My Pictures Slideshow selected, click on the **Settings** button on the right.

5. On the screen saver options page, you can change a few things like how often the pictures change, and how much of the screen they should fill. Halfway down the page, there is a section that says, **Use pictures in this folder:** Click the **Browse** button in that section.

6. In the **Browse for Folder** window, click on the folder that contains the pictures you want to use in your screen saver. If you want to display all the pictures in all the folders in your **My Pictures** folder, just select the **My Pictures** folder.

7. Click **OK** three times to save your changes.
